

SUMMARY

Software Engineer at Tata Consultancy Services (TCS) with experience in building scalable enterprise web applications in the sustainability domain using Next.js, FastAPI, and modern full-stack technologies. Skilled in graph and NoSQL databases including ArangoDB, Neo4j, Redis, MongoDB, and PostgreSQL. Hands-on experience integrating GenAI solutions using LangChain, Azure AI Services, and AI agents to build intelligent agentic workflows, automation systems, and contextual AI-driven experiences. Strong focus on scalable architecture, clean backend design, and performance optimization.

WORK EXPERIENCE

Tata Consultancy Services (TCS) — Software Engineer | Full Stack & AI Developer(1+ years)

Jan 2025 – Present

- Developed frontend features using Next.js with focus on reusable components and UI performance.
 - Built REST APIs using FastAPI following clean architecture principles.
 - Designed graph-based data models using ArangoDB and Neo4j.
 - Integrated LangChain-based GenAI workflows for intelligent data retrieval and automation.
 - Created and tested AI agents through internal platforms and integrated them into enterprise projects.
 - Contributed to sustainability analytics platforms within the CTO unit.
-

PROJECTS

Sustainability Analytics Dashboard

Tech: Next.js, FastAPI, ArangoDB, Neo4j, Redis, LangChain, Azure AI

- Designed and developed a full-stack sustainability analytics platform to track emissions, KPIs, and organizational metrics using Next.js and FastAPI.
- Built async REST APIs in FastAPI using Pydantic models, dependency injection, and clean layered architecture.
- Designed graph-based data models in ArangoDB and Neo4j to efficiently represent and query relationship-heavy datasets (organization → assets → emissions).
- Optimized complex graph queries for traversal-based analytics and KPI aggregation. Integrated Redis caching to reduce response time for frequently accessed dashboard metrics.
- Implemented natural-language Q&A over sustainability data using LangChain, prompt engineering, and Azure AI services.
- Focused on scalability, modularity, and maintainability suitable for enterprise-level analytics systems.

Hotel Online Ordering & Management System (Freelance)

Tech: Next.js, React, FastAPI, PostgreSQL, REST APIs, Push Notifications

- Designed and developed a full-stack hotel ordering and management system to display menus and accept online takeaway orders using Next.js, React, and FastAPI.
- Built a normalized PostgreSQL database schema to manage menus, categories, orders, and the order lifecycle (Placed → Preparing → Ready → Completed).
- Developed async REST APIs in FastAPI using Pydantic models and modular routing for menu retrieval, order placement, status updates, and admin operations.
- Implemented push notification triggers to notify users about order status changes (order placed, ready for pickup, completed).
- Managed React state and form validation to prevent uncontrolled/controlled input issues and ensure stable UI behavior.
- Designed the application for local client deployment, enabling easy setup via environment-based configuration and startup scripts.
- Planned Enhancements: AI-powered chatbot for menu discovery and order assistance

EDUCATION

- BSc Computer Science — Savitribai Phule Pune University (CGPA: 8.81, 2024)
 - HSC — 89% (2021)
-

SKILLS

- **Frontend:** Next.js, React.js, JavaScript, Tailwind CSS
 - **Backend:** FastAPI, Node.js, Express.js
 - **Databases:** ArangoDB, Neo4j, Redis, MongoDB
 - **GenAI & Cloud:** LangChain, Prompt Engineering, Azure AI Services
 - **Tools:** Git, GitHub, Postman, Docker (Basics), VS Code
 - **Soft Skills:** Problem Solving, Communication, Team Collaboration, Adaptability, Time Management
-

CERTIFICATIONS

- Microsoft Azure AI-102: Designing and Implementing an Azure AI Solution (Acquired)
 - Java Full Stack — QSpiders
 - TCS WINGS1 Assessment – Cleared
-

LANGUAGES

- English
 - Marathi
 - Hindi
-
